

### Course description:

This course concerns about how to design and construct compilers of formal programming languages. Topics include compilation goals, organization of a translator, grammar and languages, symbol tables. And presents the formal phases of compilation process: lexical analysis, syntax analysis (parsing), error handling, and intermediate and final code generation.

### Aims of the course:

*students are expected to:*

1. Introducing an overall view of compilation process.
2. Design a context free grammar of a formal language.
3. Implementation of the "analysis phases" of a compiler.
4. Using automated tools to implement syntax analyzers and parsers.
5. Using compiler concepts for other fields such as "pattern recognition".

### Intended Learning Outcomes (ILOs):

*Upon successful completion of this course, students will be able to:*

#### A. Knowledge and Understanding

##### A1. Concepts and Theories:

- Understand basic theories used in compilation process
- Understand the concept of compilation
- List the concepts of language theories
- Use tools and techniques to translate a program written by a high level language into machine language.
- Understand the compiler phases
- Build lexical analyzers and use them in the construction of parsers
- Perform the operations of semantic analysis.

##### A2. Contemporary Trends, Problems and Research:

- Understand recent advances in building compilers especially those that improve the efficiency of compilers.

##### A3. Professional Responsibility:

- Abide by laws and regulations of software development and design

#### B. Subject-specific skills

##### B1. Problem solving skills:

- Analyze and understand the problems affecting the performance of compilers.

##### B2. Modeling and Design:

- Learn how to design a compiler using models and tools.

### B3. Application of Methods and Tools:

- Learn how to use technique, methods and tools to translate the program into assembly code.

## C. Critical-Thinking Skills

### C1. Analytic skills:

- Use analytic skills to analyze compiler construction related problems and appropriate solution(s)

### C2. Strategic Thinking:

- Use strategic thinking to propose efficient solutions for complex problems

### C3. Creative thinking and innovation:

- Use creative thinking and innovation to solve problems affecting negatively the performance of compilers.

## D. General and Transferable Skills (other skills relevant to employability and personal development)

*Communication:* Express and communicate ideas in written and oral forms.

*Teamwork and Leadership:* Be cooperative members of a team

*Organizational and Developmental Skills:* Plan, prioritize, and achieve defined goals

*Ethical and Social Responsibility:* Understand that they are accountable for their actions and there must be a balance between economic growth and the welfare of the society and environment.

### Course Structure:

| Week  | Hours | ILOs                   | Topics   | Teaching Procedure   | Assessment methods         |
|-------|-------|------------------------|--|--|----------------------------|
| 1     | 3     | A1,A2                  | <b>Introduction</b> <ul style="list-style-type: none"><li>• Compilers</li><li>• Analysis of the Source Program</li><li>• The Phases of a Compiler</li><li>• Compiler – Construction Tools</li></ul>                          | Lecturing with active participation, quizzes, team learning. | Homework, quizzes, reports |
| 2 – 3 | 6     | A1, A2, B1, B2, B3     | <b>Lexical analysis</b> <ul style="list-style-type: none"><li>• The Role of the Lexical Analyzer</li><li>• Tokens</li><li>• regular Expression</li><li>• Specification of Tokens</li><li>• Recognition Many Tokens</li></ul> | =  | =                          |
| 4 – 7 | 12    | A1, A2, B1, B2, B3, C1 | <b>Syntax Analysis</b> <ul style="list-style-type: none"><li>• The Role of the Parser</li><li>• Context – Free Grammars</li><li>• Writing a Grammar</li></ul>  | =  | =<br><b>FIRST EXAM</b>     |

|         |   |                                    |  |   |                   |
|---------|---|------------------------------------|--|---|-------------------|
| 8 – 9   | 6 | A1, A2, B1, B2, B3, C1, C2, C3     | <b>Top-Down parsing and LL Grammar</b> <ul style="list-style-type: none"> <li>• Recursive parser</li> <li>• Predictive parsing</li> <li>• Parsing Table</li> <li>• Non recursive Parser</li> </ul> | = | =                 |
|         |   | A1, A2, B1, B2, B3, C1, C2, C3     | <b>Bottom-Up Parsing and LR Grammar</b> <ul style="list-style-type: none"> <li>• Shift-Reduce parser</li> <li>• LR(0)</li> <li>• SLR(1)</li> </ul>   |   |                   |
| 10      | 3 | A1, A2, A3, B1, B2, B3, C1, C2, C3 | <b>Semantic Analysis</b> <ul style="list-style-type: none"> <li>• Syntax Directed Translation</li> <li>• Annotated Parse Tree</li> </ul>   | = | =<br>SECOND EXAM  |
| 11 – 12 | 6 | A3, B1, B2, B3, C1, C2, C3, D      | <b>Intermediate code</b> <ul style="list-style-type: none"> <li>• Directed Acyclic Graph</li> <li>• Three Address code</li> <li>• Representation trees</li> </ul>                                  | = | =                 |
| 13 – 14 | 6 | A3, B1, B2, B3, C1, C2, C3, D      | <b>Code Generation</b> <ul style="list-style-type: none"> <li>• Implementation</li> <li>• Target language output</li> </ul>  | = | =                 |
| 15      |   |                                    |  |   | <b>FINAL EXAM</b> |

### Assessment Methods:

| Methods   | Grade | Date |
|---|-------|------|
| First Exam  | 20%   |      |
| Second Exam   | 20%   |      |
| Assignments (Reports /Quizzes/ Seminar / Tutorials /Homework....) | 10%   |      |
| Final Exam  | 50%   |      |
|   |       |      |
